

The safest luggage transport

There is no exact guideline for how long the virus survives on each surface. For this reason, at TUITRANS we will carry out thorough cleaning measures at all times. The TUITRANS team undertakes to deliver the luggage disinfected.

Handles and extenders will be disinfected, with a virucidal disinfectant spray, authorised by the Ministry of Health, directly on the surface when each piece of luggage is collected and delivered

We will give priority to the disinfection of each piece of luggage from collection to delivery.

In this way, our drivers, with the proper hygiene measures, will make disinfection of each piece of luggage in the collection and delivery.

The luggage will be transported with all the disinfection and hygiene measures to the next accommodation.

The driver will always open the van for the collection or delivery of the luggage, with previous disinfection of the hands with a hydroalcoholic solution. He will also be in charge of checking and cleaning all the luggage and the vehicle.

Collection and delivery schedules will be established.

To work together, we ask for punctuality in the collection and greater flexibility in the delivery. We have to be aware that all these measures will mean extra time, for the benefit and safety of all.

Booking the service as far in advance as possible to be able to organise our work. We cannot guarantee same-day or day-to-day bookings.

Our staff will comply with hygiene protocols

All workers agree not to come to our workplace with any symptoms of COVID-19, such as fever, cough, sneezing or shortness of breath.

We will have gloves, approved masks and respect the safety distance, as much as we would like to hug you

Clients must also comply with protection protocols

Also, the client commits to execute their hygiene regulations and safety protocols before the COVID-19 and will comply with the established schedules.

Trust us for a safer path
